SUMMARY

I am a software engineer with hands-on experience building responsive web applications using React, JavaScript, HTML and CSS, along with a working knowledge of Python and Django. I am comfortable integrating RESTful APIs and collaborating within remote, distributed teams, and I have already shipped full-stack projects from the ground up. I am currently focused on deepening my front-end skills, particularly around component design and API integration, while continuing to grow into a well-rounded software engineer.

SKILLS

I work comfortably across JavaScript (ES6+), Python, HTML5 and CSS3, and I build with React.js on the front end and Django on the back end. My broader technical toolkit includes RESTful API integration, Git and version control, responsive web design, and UI/UX design. Alongside these technical skills, I bring adaptability, strong problem solving and critical thinking, self motivation, clear written and verbal communication, sound time management, and a collaborative approach to working in a team.

EXPERIENCE

Front-End Developer, Oreipulse (SaaS Platform)

2026 – Present

At Oreipulse, I develop responsive, user-focused web interfaces for the company's SaaS platform using React and modern JavaScript. I built a Todo list web application using Python and Django, covering both the front end and the back end, and I regularly contribute to front-end feature development, debugging and bug fixing to improve overall application stability and performance.

Youth Coding Instructor, Uncommon.org

Since 19 January 2026 — Teaching across four schools

In this role, I teach programming fundamentals to primary school students using Scratch across four schools. I design and deliver beginner-friendly coding lessons that build foundational computational thinking skills, and I support young learners in developing problem-solving abilities through hands-on, project-based coding exercises.

PROJECTS

I am currently building a biometric authentication software application, with a targeted release planned for February of next year. I was also selected as a participant in the 2026 Cimas Healthathon, where I collaborated with others on innovative healthcare technology solutions.

EDUCATION

I am currently completing a National Certificate in Software Engineering at Uncommon.org in Harare, Zimbabwe, expected in 2026. I hold eight O-Level subjects and four A-Level points.

CERTIFICATES

I hold certificates in React and in Python, both completed through Coursera.
